

ABSTRACT OF THE DISCLOSURE

An apparatus for treating garbage, characterized as having a flow rate controlling tank for storing temporarily a mixture of a garbage having been pulverized by a disposer with a kitchen waste, water, a solid-liquid separating device for separating the mixture supplied from the flow rate controlling vessel into a solid part and a liquid part, a composting facility for converting the solid part separated by the solid-liquid separating device into a compost, a precipitation-separation tank for precipitating fine particles in the liquid part supplied from the solid-liquid separating device, a split-flow device for distributing a liquid part supplied from the precipitation-separation tank, and a waste water treating device for subjecting a liquid part supplied from the split-flow device to a biological treatment to thereby obtain a treated water. The apparatus for treating garbage can be used for treating a mixture from a disposer with good efficiency.
